

FOR CONTENT CREATORS

One creator. Four platforms. Zero burnout.

The AI-powered content engine that turns one idea into a week of posts across Instagram, Facebook, TikTok, and Threads — automatically.

See how it works

Explore features

THE CREATOR'S DILEMMA

You're expected to be on every platform.

Each one wants different sizes, captions, hashtags, cadence. The work piles up. Creativity gets buried.

What you signed up for

- Make great content
- Build an audience
- Tell stories
- Connect with people

What actually happens

- Resize the same image four times
- Rewrite the caption for each platform
- Hunt through stock photo sites
- Cross-post manually at 9 PM
- Wonder which post worked

6–8 hours

The average solo creator spends this much per week on busywork that has nothing to do with creating.

BUILT ON FOUR PILLARS

Everything you need. One workspace.

Kakoi isn't a scheduler with AI bolted on. It's an end-to-end system designed for the way creators actually work.

1

Content engine

RSS scraping, URL → post, Pexels stock photos, AI captions in three models, automatic card generation, and LLM-built carousels. You never start from a blank page.

2

Multi-platform fan-out

Publish to Instagram, Facebook, TikTok, and Threads in parallel from one button. Token health monitoring, platform-specific length warnings, per-platform scheduling.

3

Smart automation

Autopilot end-to-end. Brand Voice validation. A/B caption testing. Multi-language variants. Smart hashtag suggestions. The machine handles the repetition.

4

Analytics that act

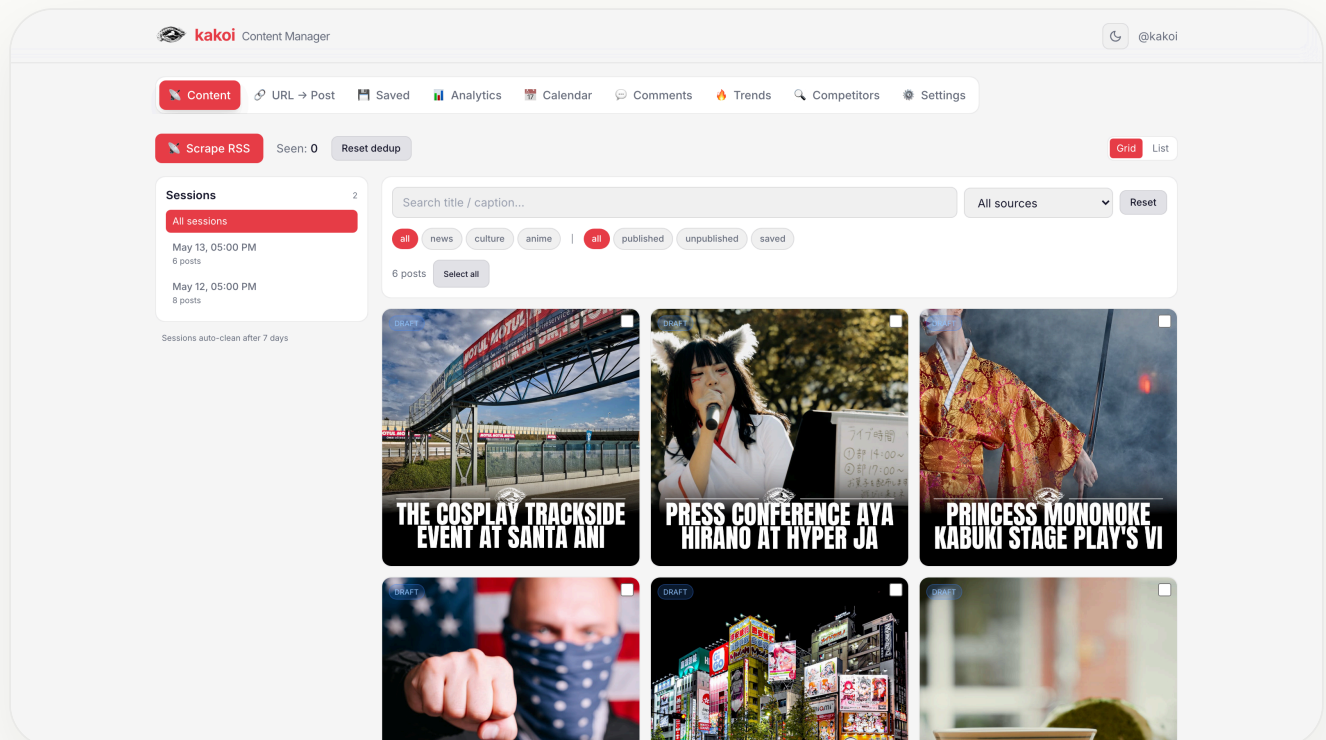

Not just dashboards — recommendations. Optimal posting times. Content recycling suggestions. Hashtag performance. PDF/CSV export for clients and reports.

THE CONTENT TAB

Every article. AI-scored. Ready to publish.

Open Kakoi and see your entire feed — articles scraped from your RSS sources, scored by quality, and waiting for a one-click publish.

- ✓ Filter by source, category, score, or session
- ✓ Per-session history with full audit trail
- ✓ Bulk-select and batch-save in one click
- ✓ Expand any card to access the full publishing toolbar

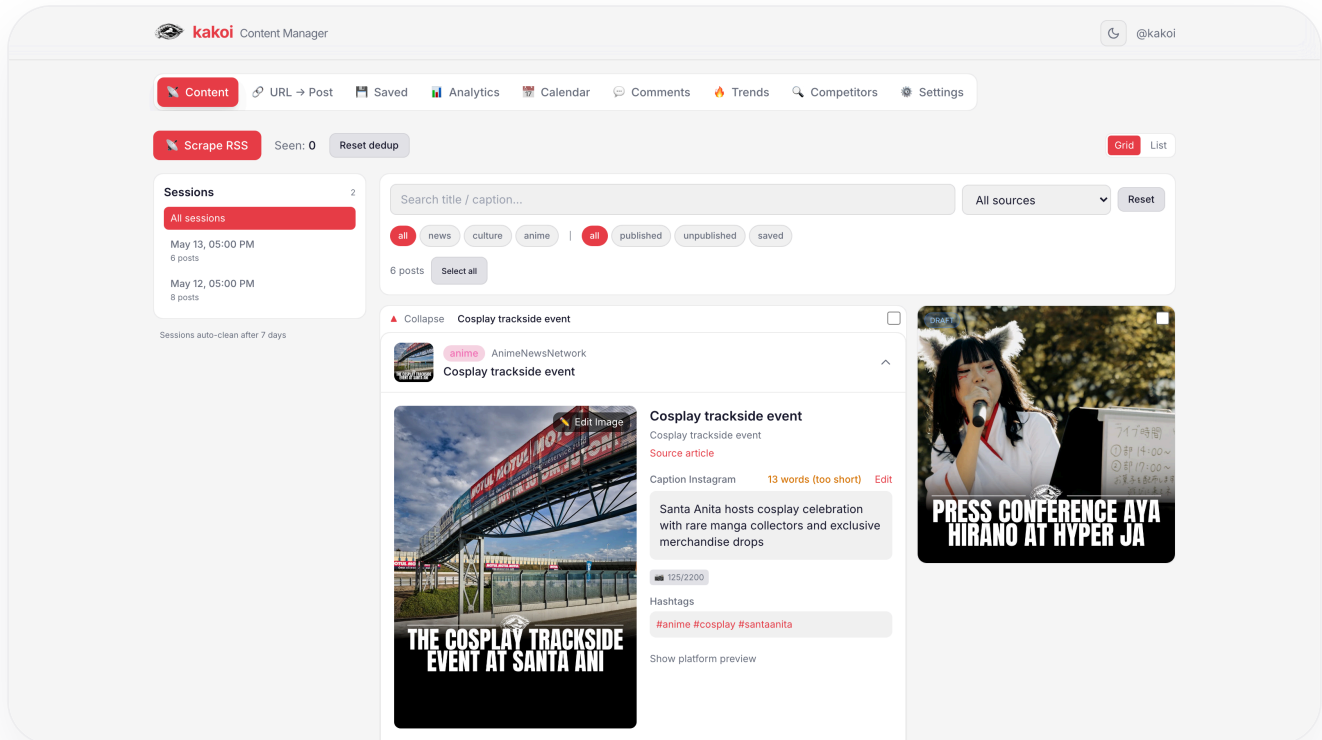

THE EXPANDED POST

Every feature, one click away.

Click any article to expand it. The full toolbar drops in: regenerate captions, swap photos, validate brand voice, generate multi-language variants, run an A/B test, shorten the article link — and publish to four platforms in parallel.

- ✓ 🎧 Voice — Brand-tone validation with score and suggestions
- ✓ 🌐 Lang — Multi-language caption variants on demand
- ✓ ✏️ A/B — Two caption variants for the same post
- ✓ 🔗 Short — Compress the article link with built-in shortener
- ✓ 📤 Publish — Multi-platform fan-out in one click

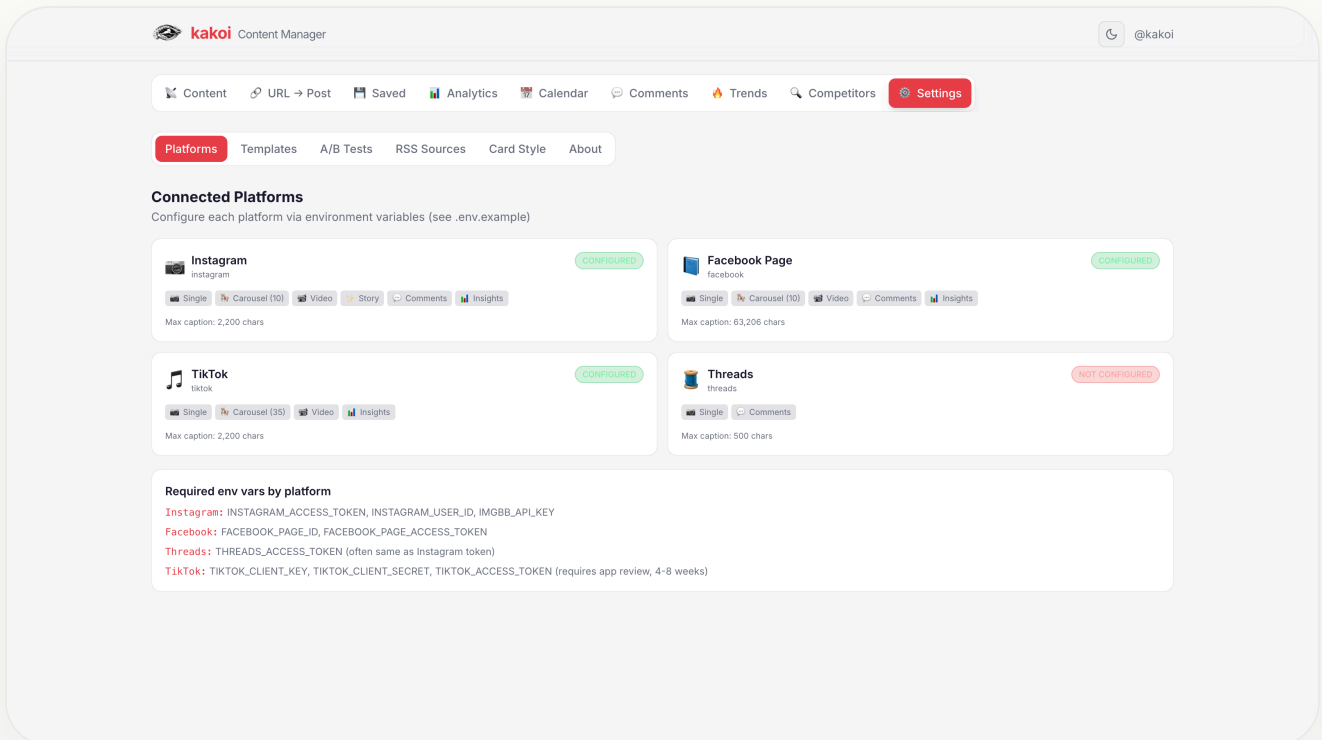

MULTI-PLATFORM FAN-OUT

Four platforms. One click. Parallel publishing.

Connect each account once. Kakoi handles the rest — different image sizes, caption length limits, hashtag rules, scheduled publishing.

- ✓ Instagram — single posts, carousels, stories, video, insights
- ✓ Facebook Page — single posts, carousels, video, insights
- ✓ TikTok — photo carousel posts (saved as drafts in the TikTok app)
- ✓ Threads — text posts (more on the way)
- ✓ Live health monitoring tells you before any account expires

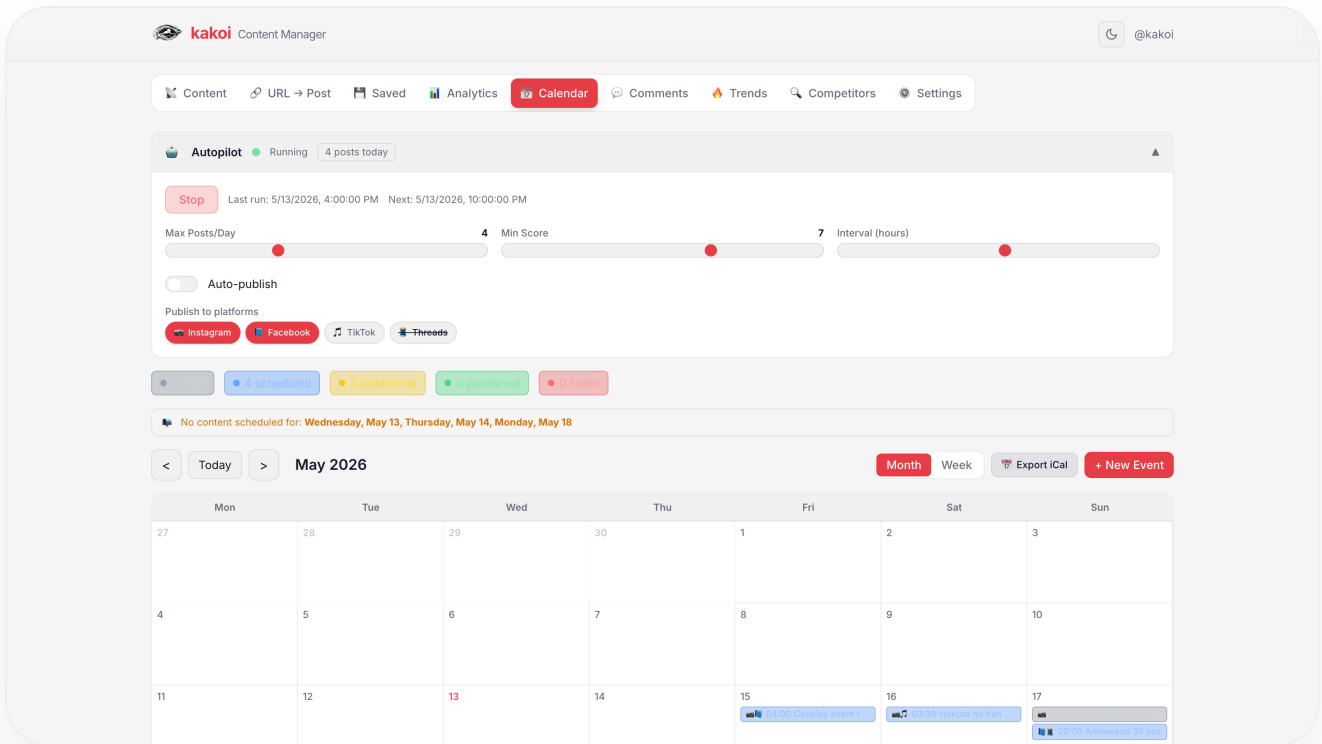

AUTOPILOT

Set guardrails. Walk away.

Autopilot runs the entire pipeline — scrape, score, generate captions, generate images, queue, and publish — on your schedule, within your rules.

- ✓ Maximum posts per day — hard ceiling so you never spam

- ✓ Minimum score threshold — only publish quality content
- ✓ Allowed categories — stay on-brand
- ✓ Per-platform targeting — IG + FB only, or all four
- ✓ Live status: last run, next run, posts today

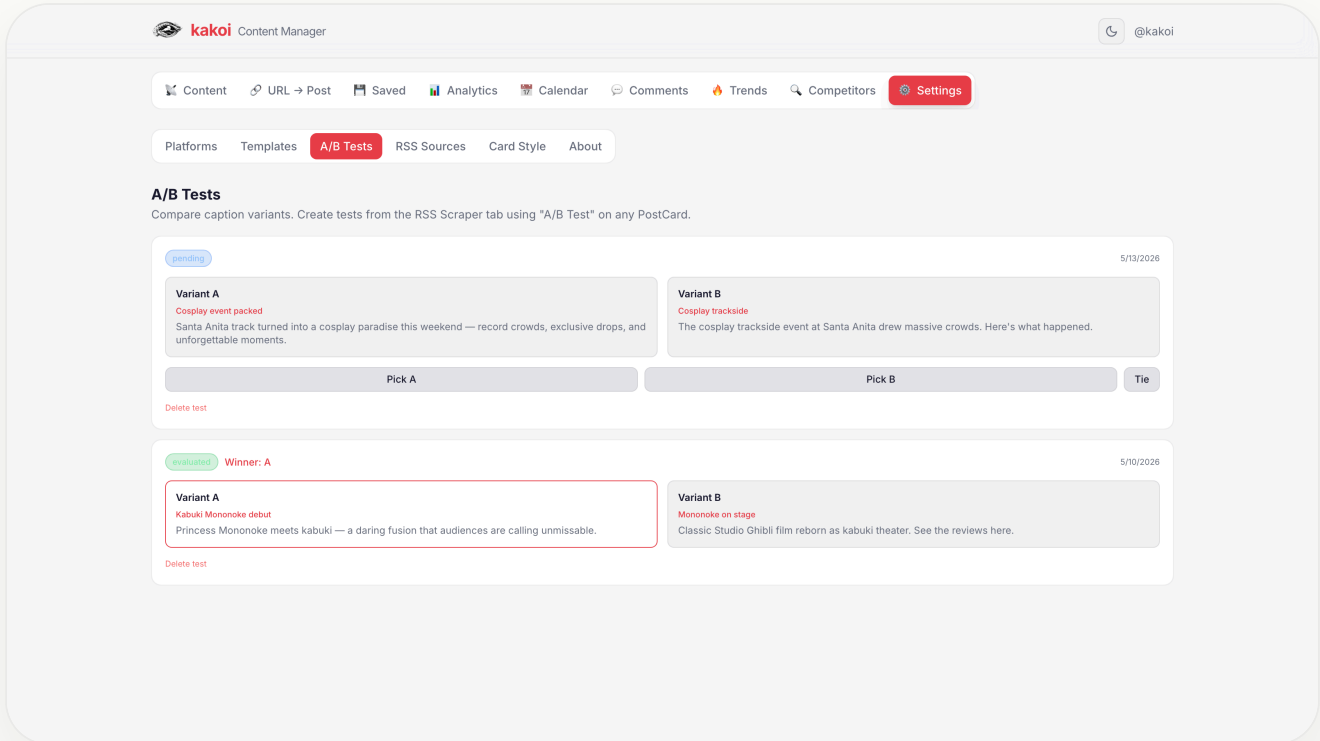

A/B TESTING

Stop guessing what works.

From any post, generate two caption variants with one click. Side-by-side review. Pick the winner. Kakoi tracks the pattern. Over time you learn what your audience actually clicks on.

- ✓ One-click variant generation from the same article

- ✓ Side-by-side comparison with winner highlighting
- ✓ Pick A, Pick B, or Tie — Kakoi remembers
- ✓ Build a body of evidence about your own audience

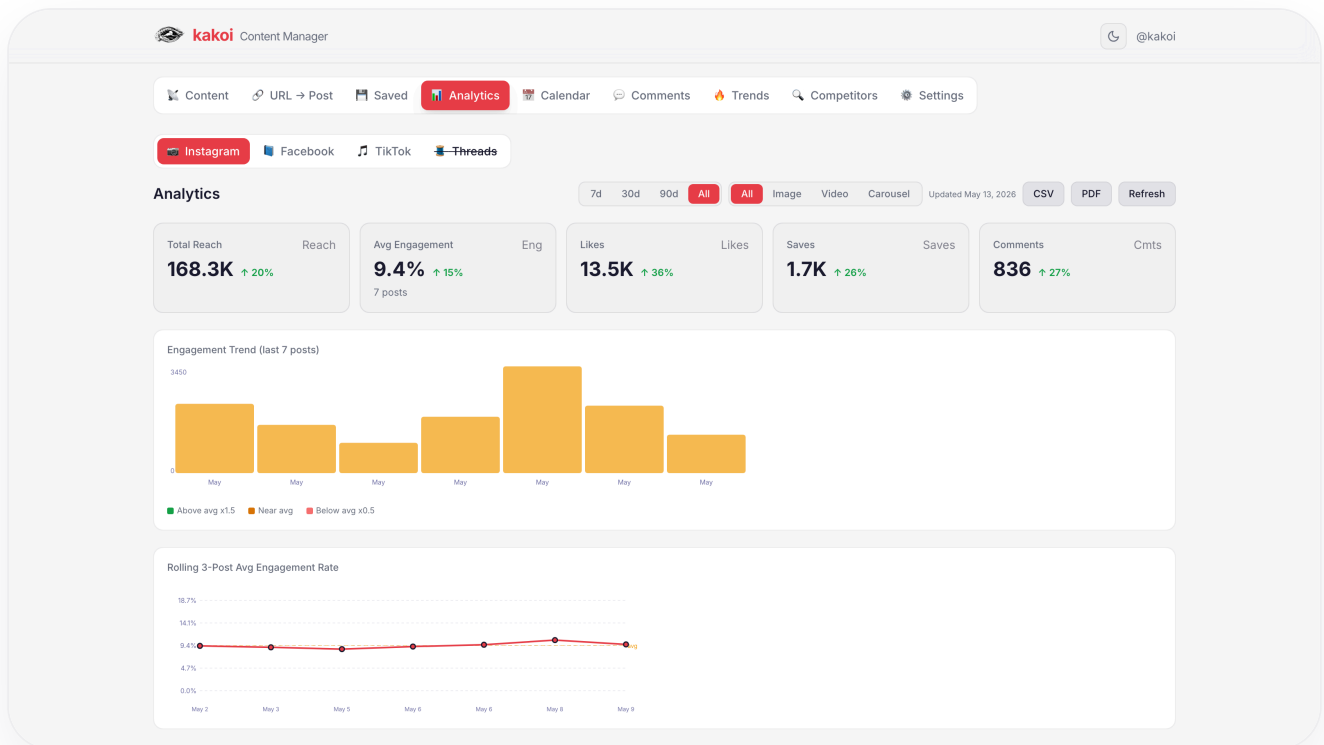

ANALYTICS

Not just charts. Recommendations.

Most analytics tools show you what happened. Kakoi tells you what to do about it.

- ✓ Five live metric cards — Reach, Engagement, Likes, Saves, Comments
- ✓ Trend indicators with prior-period comparison
- ✓ Optimal posting time — 7x24 heatmap of your audience
- ✓ Content recycling — surfaces high-performers > 90 days old

- ✓ Hashtag strategy — performance tracking + LLM suggestions
- ✓ One-click CSV or PDF export for client reports

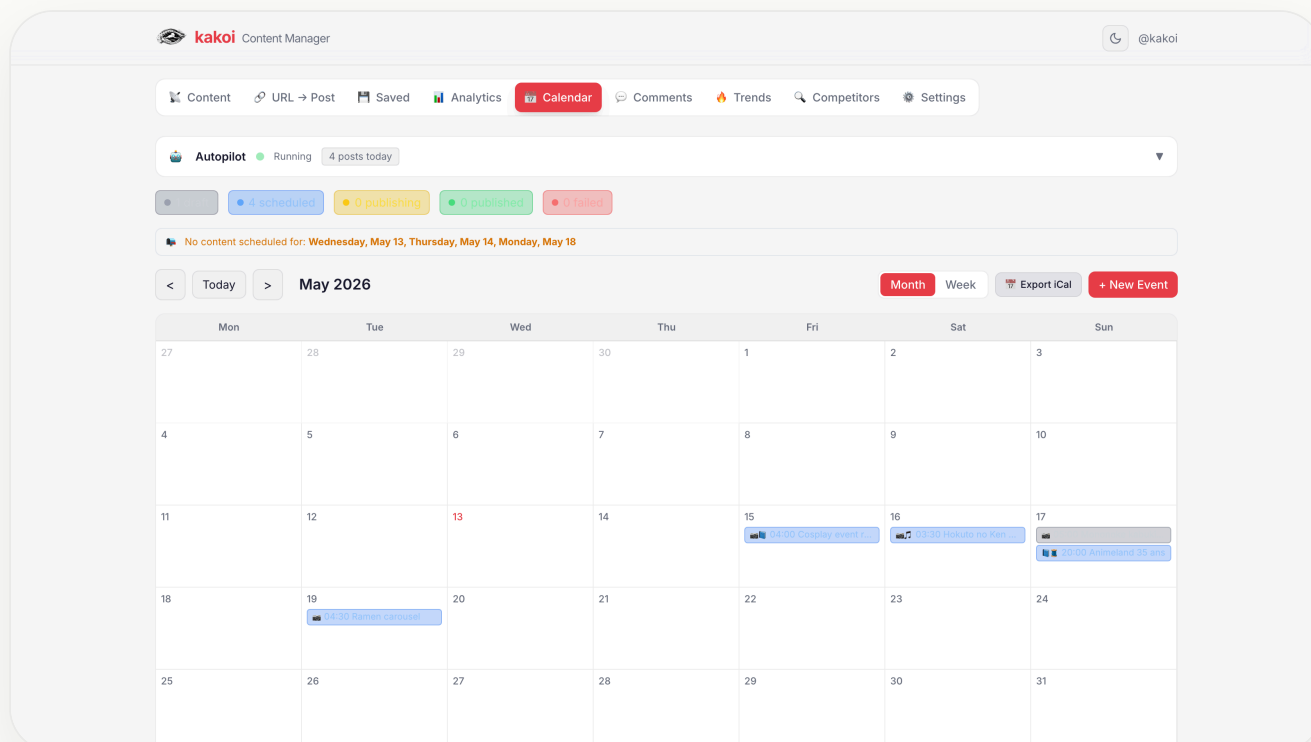

CALENDAR

See your whole month at a glance.

Drag, drop, reschedule. Different platforms get different posts on the same slot. Export to iCal and pipe into Google Calendar or Notion. The calendar also surfaces what Autopilot has queued — no surprises.

- ✓ Month, week, or day views
- ✓ Drag-and-drop to reschedule
- ✓ Multi-platform events on the same date

- ✓ One-click iCal export to Google Calendar, Apple Calendar, or Notion
- ✓ Reads Autopilot's upcoming queue

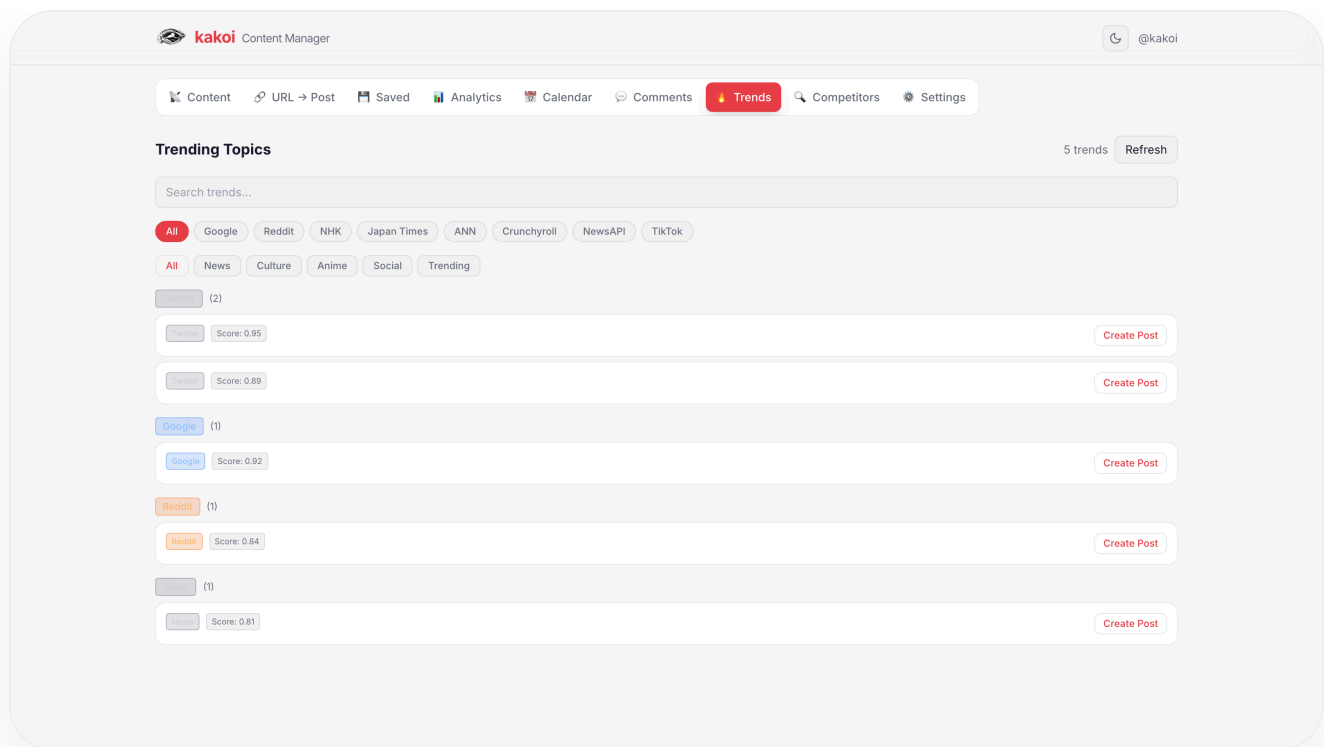

TRENDS

Never miss a moment.

Real-time topic discovery from Twitter, Google, Reddit, and news sources. Ranked by topical heat. Pull a trending topic straight into a new post.

- ✓ Aggregated trend signals from multiple sources
- ✓ Heat score, recency, and category filters
- ✓ One-click "Create Post" from a trending topic
- ✓ Stay current without doom-scrolling Twitter

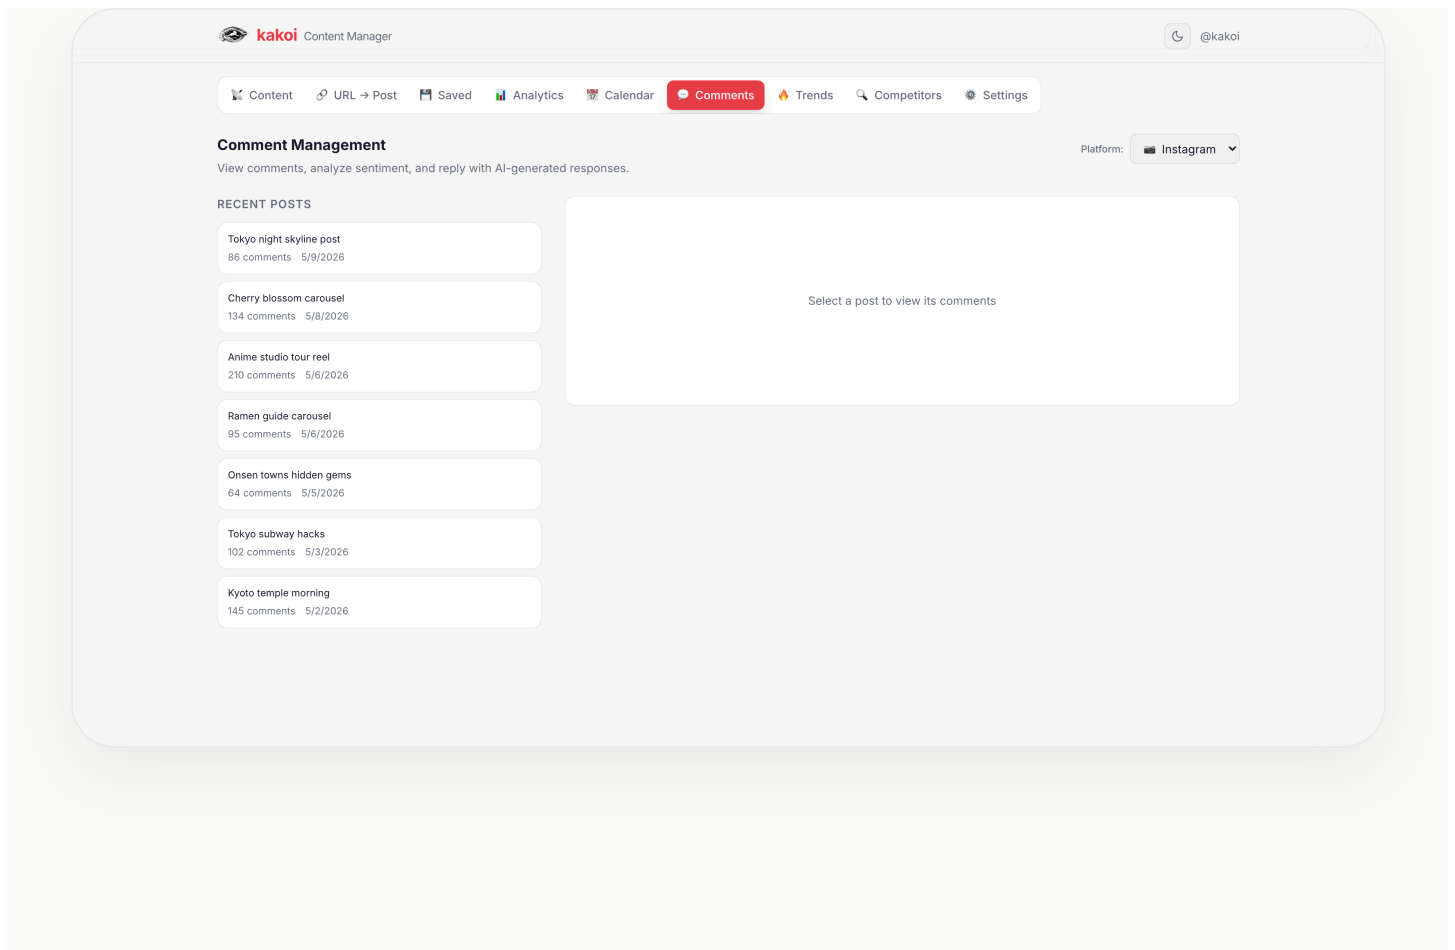

COMMENTS + AI REPLIES

Engage in minutes. Not hours.

Aggregated comment inbox across configured platforms. Sentiment analysis to triage. AI reply suggestions in your brand voice. One-click reply, or edit first.

- ✓ Unified inbox across IG, FB, Threads
- ✓ Sentiment sort: positive / negative / neutral
- ✓ AI-drafted replies tuned to your brand voice
- ✓ Reply, edit, or escalate

BUILT FOR REAL CREATORS

Whoever you are, Kakoi works.

From solo news curators to one-person brand teams to lifestyle creators juggling four platforms — here's what Kakoi does for each.

News curator

Daily niche content

Wake up to a week of posts.

Subscribe to 10–15 RSS feeds. Set Autopilot to score-7 minimum, 2 posts/day. Autopilot scrapes, scores, generates, queues, publishes.

 Time saved: ~20 hours / month

Travel / lifestyle

Mix of personal + curated

Higher cadence. Same voice.

Use URL → Post for finds you discover. Pexels for stock fillers. Image Editor for your own photos. Multi-language for international reach.

 Post 5× more without losing personality

Solo brand / agency

One-person marketing team

Look like a five-person team.

Brand Voice validates every post. A/B testing on launches. Monthly PDF export → client decks. Recycle your top quarter performer.

 Marketing ops at agency scale

A DAY IN THE LIFE

The same morning. Different outcome.

Before Kakoi

- 9:00 AM** Open laptop, scroll Twitter for ideas
- 9:45 AM** Find article. Open Canva, design card
- 10:30 AM** Write caption. Rewrite for Instagram. Shorter for Threads
- 11:00 AM** Resize image to 9:16 for TikTok
- 11:20 AM** Upload to Buffer. Schedule.
- 11:35 AM** Realize you forgot Threads. Cross-post manually.
- 3:00 PM** Check Instagram insights in app
- 3:15 PM** Check Facebook page insights in different app

— That's one post. The afternoon is gone. —

With Kakoi

- 9:00 AM** Open Kakoi. Content tab shows 18 new articles, AI-scored
- 9:02 AM** Click 3 articles. AI generates captions + cards + carousel slides
- 9:04 AM** Review. Edit one caption. Publish — IG + FB + Threads + TikTok
- 9:05 AM** Switch to Calendar tab. Drag tomorrow's post to 7 PM
- 9:06 AM** Done.

— The whole afternoon belongs to you. Or skip it entirely — Autopilot does this while you sleep. —

WHY NOT JUST A STACK OF TOOLS?

Kakoi vs. Buffer + ChatGPT + Canva.

You could glue three SaaS tools together with a spreadsheet. Many creators do. Here's what they lose.

	3-tool stack	Kakoi
Monthly subscriptions	3+	1
Context-switching cost	High	None
AI knows your past posts	✗ No	✓ Yes
One-click multi-platform publish	✗ No	✓ Yes
Autopilot end-to-end	✗ No	✓ Yes
Analytics → action loop	✗ No	✓ Yes
Data ownership	3 silos	One place you own

Export and leave anytime
