

Kakoi

The creator's dilemma

You're expected to be on **every platform**.

Each one wants different sizes, captions, hashtags, cadence.

What you signed up for

- Make great content
- Build an audience
- Tell stories

What actually happens

- Resize the same image 4 times
- Rewrite the caption for each platform
- Hunt for stock photos
- Cross-post manually at 9 PM
- Wonder which post worked

Why existing tools fall short

Tool category	What it does	What it doesn't
Schedulers (Buffer, Later, Hootsuite)	Queue posts you already made	Don't help you <i>make</i> the post
AI writers (ChatGPT, Jasper)	Generate captions	Don't publish, don't reformat, don't track
Design tools (Canva, Figma)	Create graphics	No automation, no analytics
Analytics (Sprout, Iconosquare)	Show what worked	Don't act on the insight

You end up gluing 4 tools together with a spreadsheet.

What Kakoi is

*A single workspace that goes from "**interesting article**" to "**published on 4 platforms**" in under a minute — with you in the loop only when you want to be.*

It is:

- A **smart onboard** — reads your existing posts to learn your niche, language, and voice
- A **content engine** — niche-personalized RSS + URL + stock photos + AI captions + image generation
- A **publisher** — Instagram, Facebook, TikTok, Threads, all from one button
- An **analyst** — see what's working, when to post, what to recycle
- An **autopilot** — set it once, it scrapes, scores, generates, publishes

The end-to-end flow

Every step is **automatable**. Every step is **interruptible**.

You stay in control of the voice. The machine handles the rest.

Five feature pillars

1. **Smart onboarding** — Kakoi learns your niche in 30 seconds
2. **Content engine** — never run out of ideas
3. **Multi-platform fan-out** — publish everywhere, simultaneously
4. **Smart automation** — A/B, voice, language, autopilot
5. **Analytics + recommendations** — not just dashboards, *what to post next*

Pillar 1: Smart onboarding

LLM niche detection

3-step wizard

Per-niche defaults

Sign in with Instagram or Facebook — Kakoi reads your last 20 posts and **figures out what kind of creator you are** before you click anything.

- **Niche detection** — anime, tech, food, fitness, English teaching, travel, music...
- **Language + tone auto-set** — your captions match how you actually post
- **RSS feeds + brand voice seeded** for *your* niche, not a generic default
- **Confirm or adjust in 3 taps** — no forms, no developer setup, no API keys

Most creator tools start as a blank canvas. Kakoi starts already knowing you.

Pillar 2: The Content Engine

RSS scraping

URL → Post

AI captions

Stock photos

Card generation

Carousels

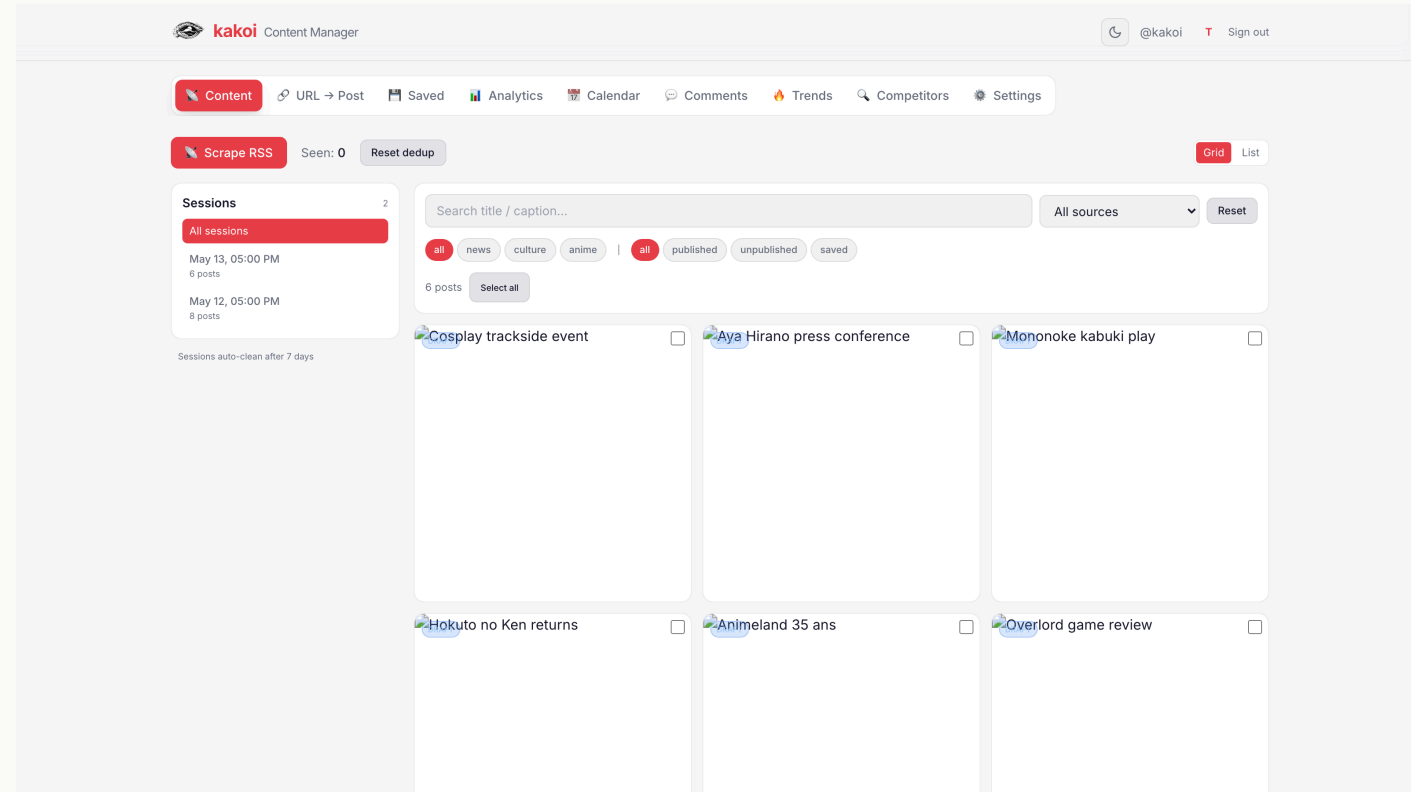

- **14 default RSS feeds** + add your own (any URL with a feed)
- Paste **any article URL** — Kakoi extracts and reformats it
- **AI captions** powered by the latest large language models — your choice of provider
- **Pexels integration** — auto-search relevant stock photos
- **1080×1440 card images** generated automatically (logo, title, gradient)
- **LLM-generated carousels** with drag-to-reorder slides

You never start from a blank page.

The Content tab

One unified feed of everything Kakoi scraped — AI-scored, ready to publish.

- Filter by source, category, score
- Per-session history
- Bulk-select to batch-save
- One click expands a card

The expanded card

Every feature one click away:

 **Voice** validates brand tone

 **Lang** generates multi-language variants

 **A/B** spawns two caption variants

 **Short** shrinks the article link

 **Publish** fans out to selected platforms

 **Calendar** schedules instead of publishing now

Pillar 3: Publish Everywhere

Instagram Facebook TikTok Threads

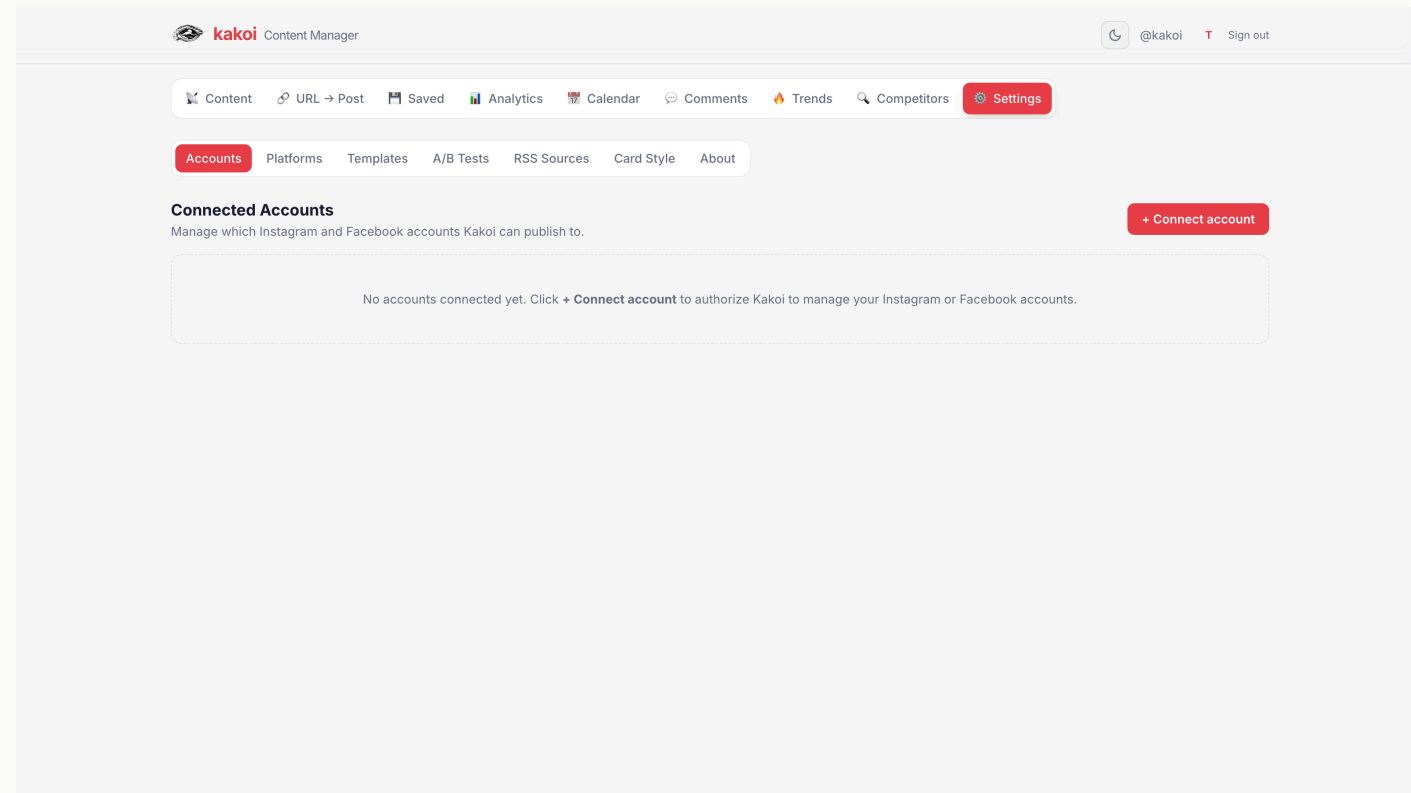

Platform	Single post	Carousel	Stories	Insights
Instagram	✓	✓	✓	✓
Facebook Page	✓	✓	—	✓
TikTok	✓ (drafts)	✓ (drafts)	—	✓
Threads	✓	—	—	—

- **One button** publishes to selected platforms in parallel
- **Token health monitoring** — Kakoi tells you before access expires
- **Platform-specific length warnings** when caption is too long
- **Per-platform schedules** via calendar

Connected platforms at a glance

Every platform's capabilities, configured status, and caption limits — visible at all times.

- Instant **Connected / Not Connected** indicator
- See exactly what each platform supports (Single, Carousel, Stories, Video, Comments, Insights)

Pillar 4: Smart Automation

Autopilot

Scrape → score → generate → publish.
Set guardrails (min score, max posts/day, allowed categories).
Walk away.

A/B Testing

Generate two caption variants.
Track which performs.
Pick a winner — Kakoi learns.

Brand Voice

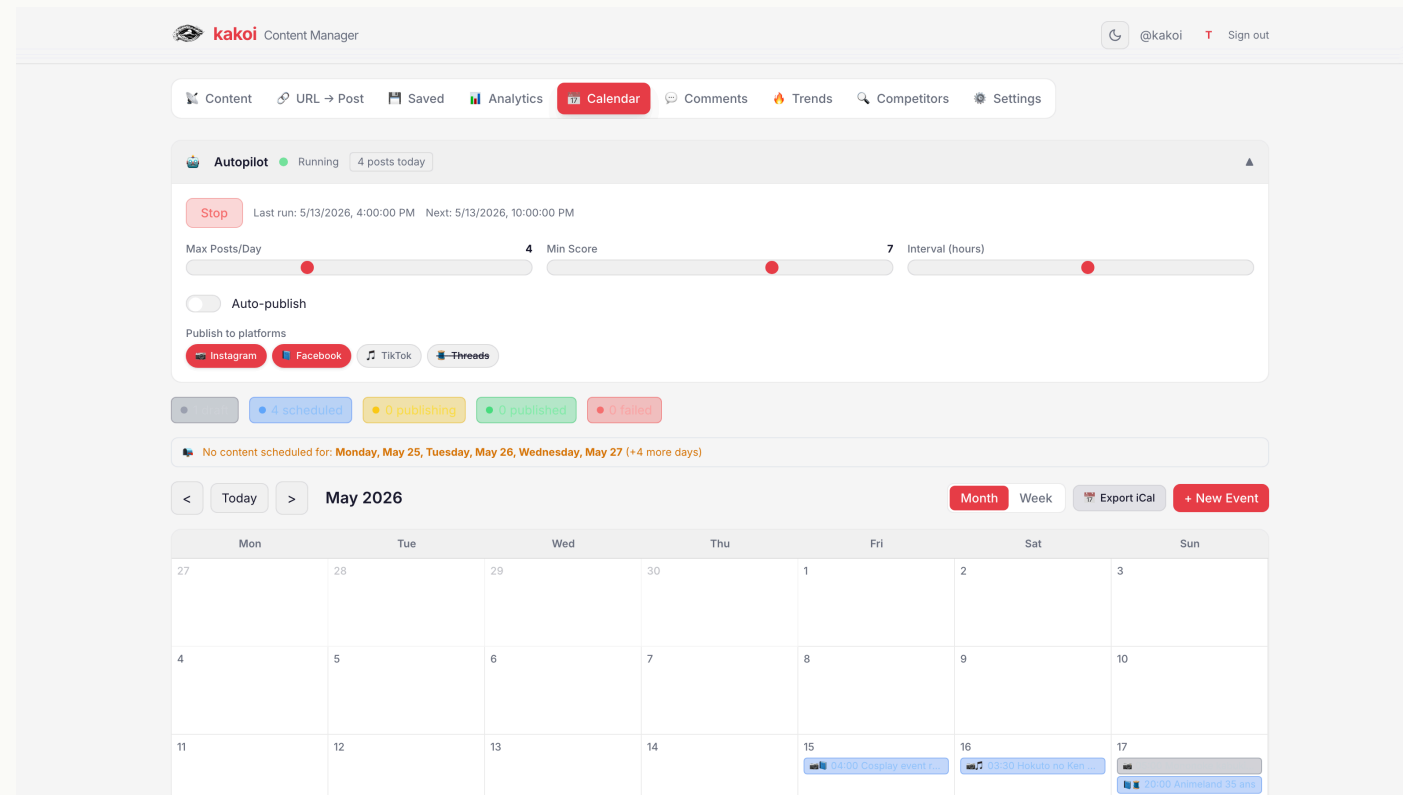

LLM validates each caption against your brand guidelines.
Score + suggestions before you publish.

Multi-language

Same post in English, Japanese, French (or any language) with one click.

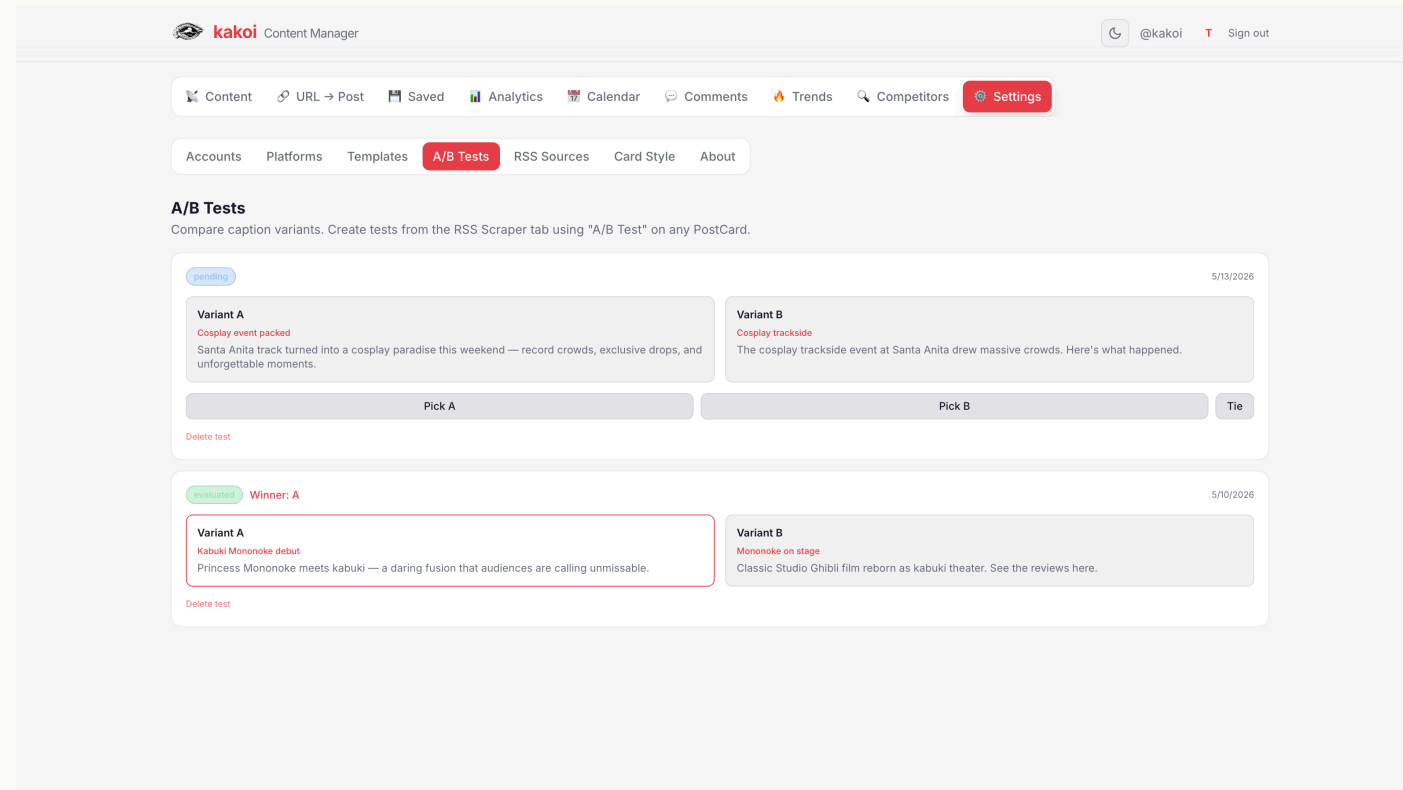

Autopilot — set guardrails, walk away

- **Max posts per day** — hard cap so you never spam
- **Min score** — only publish AI-scored quality content
- **Allowed categories** — stay on-brand
- **Per-platform targeting** — IG + FB only, or all four
- **Live status** — see last run, next run, posts today

A/B testing built in

- One click generates two caption variants from the same article
- Side-by-side review with winner highlighting
- **Pick A, Pick B, or Tie** — Kakoi tracks the pattern
- Over time you learn what your audience clicks on

Pillar 5: Analytics + Recommendations

Not just charts. **Answers to "what should I post today?"**

- **Optimal posting time** — 7×24 heatmap of your audience's engagement
- **Best posting day** — surfaced on the dashboard
- **Content recycling** — Kakoi finds your high-performers > 90 days old
- **Hashtag strategy** — performance tracking + LLM suggestions
- **Engagement trends** — rolling 3-post average, comparison to prior period
- **Recommendations tab** SOON — one feed mixing trends, recyclable winners, and "your carousels do 2.4× — here are 3 new ones"
- **CSV / PDF export** — for clients, agencies, or your own records

What the analytics tab shows you

- Five live metric cards: **Reach**, **Engagement %**, **Likes**, **Saves**, **Comments**
- Each card shows the **trend** (▲ or ▼) and comparison to prior period
- **Engagement Trend** bar chart — last 7 posts, color-coded by performance
- **Rolling 3-post average** line chart — smooths the noise
- Date range filter (7d / 30d / 90d / all) + content type filter
- One-click **CSV** or **PDF** export

A day in the life — *before Kakoi*

9:00 AM — *Open laptop, scroll Twitter for ideas*

9:45 AM — *Find article. Open Canva, design card*

10:30 AM — *Write caption. Rewrite for Instagram. Shorter for Twitter*

11:00 AM — *Resize image to 9:16 for TikTok*

11:20 AM — *Upload to Buffer. Schedule.*

11:35 AM — *Realize you forgot Threads. Cross-post manually.*

3:00 PM — *Check Instagram insights in app*

3:15 PM — *Check Facebook page insights in different app*

— That's one post. —

A day in the life — *with Kakoi*

9:00 AM — Open Kakoi. Content tab shows 18 new articles, AI-scored

9:02 AM — Click 3 articles. AI generates captions + cards + carousel slides

9:04 AM — Review. Edit one caption. Hit Publish — IG + FB + Threads + TikTok in parallel

9:05 AM — Switch to Calendar tab. Drag tomorrow's post to 7 PM

9:06 AM — Done.

The whole afternoon belongs to you.

Or skip steps 1–4 entirely: **Autopilot** does it while you sleep.

Use case: The news curator

Profile: Posts daily about a niche (tech, finance, anime, politics).

Kakoi setup:

- Subscribe to 10–15 relevant RSS feeds in Settings
- Set Autopilot: min score 7, 2 posts/day, news + culture only
- Autopilot scrapes, scores, generates, queues to calendar

Result: Wake up to 14 posts/week, on-brand, already scheduled.

Time saved: ~20 hours/month.

Use case: The travel / lifestyle creator

Profile: Posts a mix of personal photos + curated finds.

Kakoi setup:

- Use URL → Post for articles you discover
- Use Pexels integration for filler / stock-style posts
- Use Image Editor to crop/filter your own photos to 1080×1440
- Multi-language: post EN + native language for international reach

Result: Higher post cadence without losing the personal voice.

Use case: The one-person brand / agency

Profile: Solo founder, indie SaaS, freelancer, consultant.

Kakoi setup:

- Brand Voice: define your guidelines once, validate every post
- A/B test launch posts to learn what your audience clicks
- Analytics: monthly PDF export → use in client decks or marketing reports
- Content Recycling: re-share your top-performing post from last quarter

Result: Marketing operations that look like a 5-person team.

Visual control when you want it

Card Editor — Tweak the auto-generated card image

- Change title, gradient, layout
- Save reusable templates per category

Image Editor — Canvas-based, in-browser

- Crop, filter, text overlay
- Works on any post's hero image

Carousel Builder — Drag-and-drop slide reordering

Autopilot doesn't mean "lose control." It means "skip the boring parts when you want to."

Calendar + planning

- **Month / Week / Day** views
- **Drag-and-drop** to reschedule
- **Per-platform** events — schedule different posts for different platforms on the same slot
- **iCal export** (RFC 5545) — pipe into Google Calendar, Apple Calendar, Notion
- **Calendar reads from Autopilot** — see queued posts before they go out

See your whole month at a glance. Edit anything, anytime.

Comments + AI replies

- Aggregated inbox across configured platforms
- **Sentiment analysis** — sort by positive / negative / neutral
- **AI-generated reply suggestions** in your brand voice
- One-click reply, or edit first

Engage with your audience in minutes per day, not hours.

Comments inbox

All your audience interactions in one panel, organized by post and sentiment.

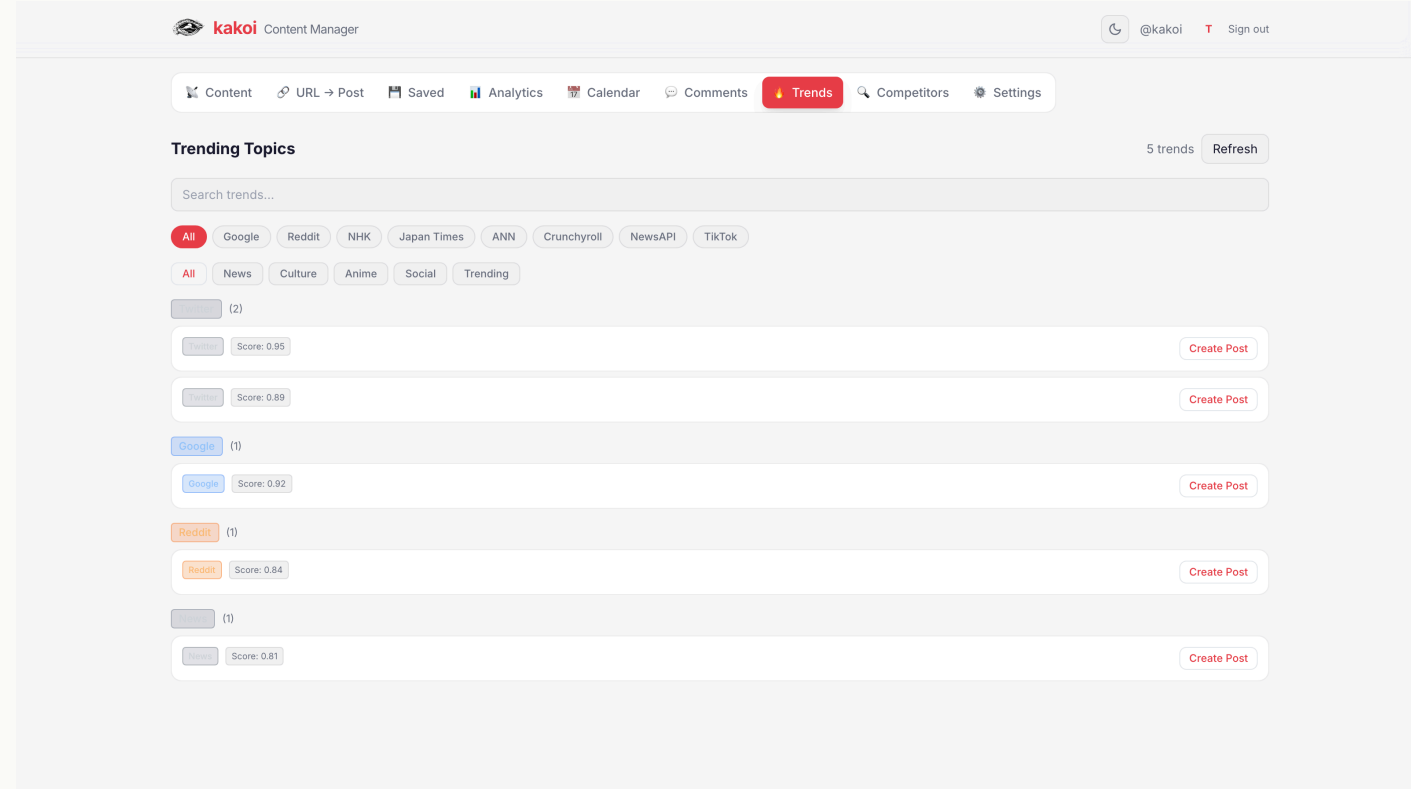

Trends — *your* niche, not someone else's

A background agent watches Reddit, Google Trends, and news sources every 30 minutes and **re-ranks the results for your niche** — what's hot in *your world*, not a generic feed.

- Ranked by topical heat score

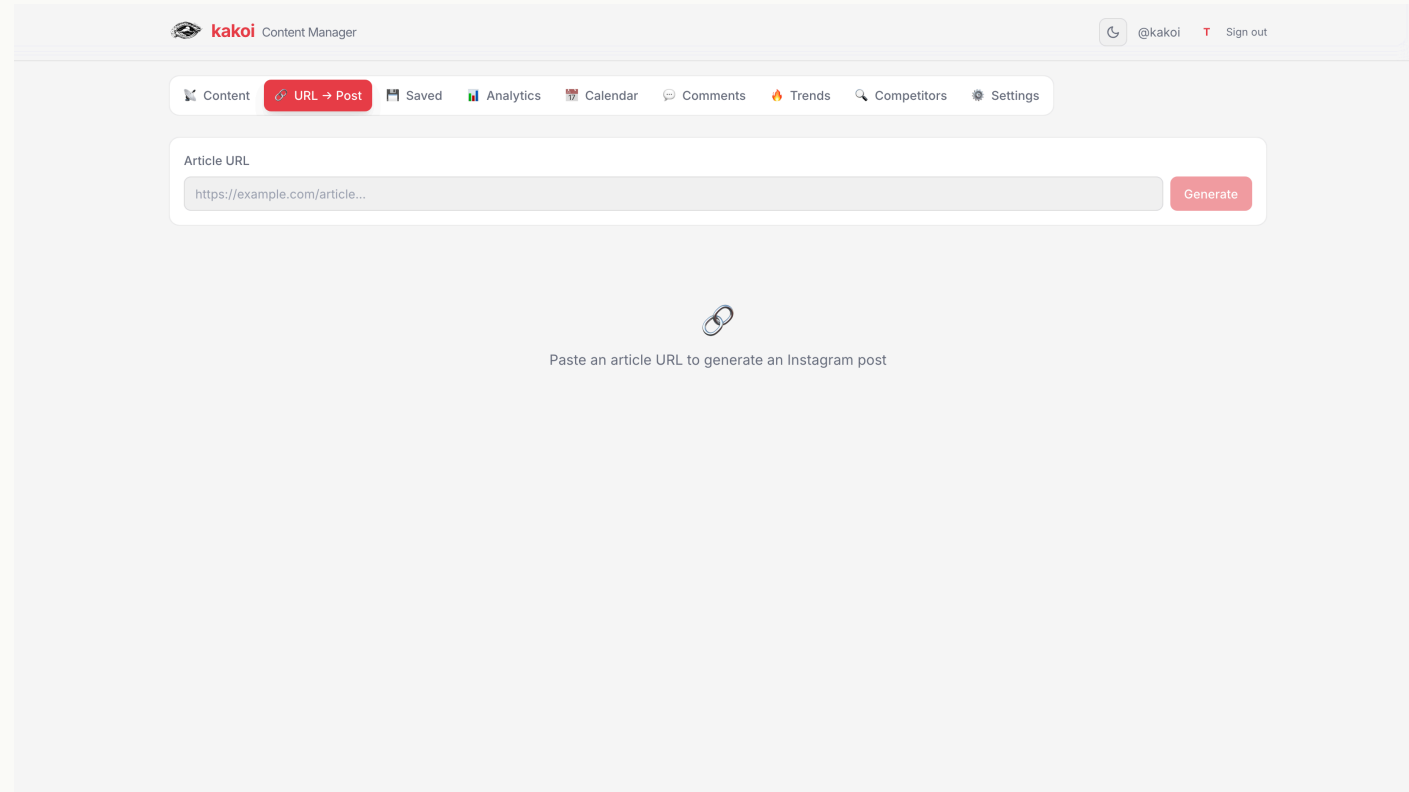

- Re-ranked per creator: 2x

URL → Post

Paste any article URL — Kakoi extracts content, generates an on-brand caption + card, and queues it for review.

Perfect for when you stumble on something good outside your RSS feeds.

Why Kakoi, not Buffer + ChatGPT + Canva?

	Stack of 3 tools	Kakoi
Subscriptions	3+	1
Switching cost	High	None
Knows your niche on day one	No	Yes — reads your existing posts
AI knows your past posts	No	Yes
One-click multi-platform	No	Yes
Autopilot end-to-end	No	Yes
Personalized trends feed	No	Yes — re-ranked per creator
Analytics → action loop	No	Yes
Your history lives in	3 silos	One workspace

You own your content

- **Your posts. Your audience. Your insights.** Kakoi never claims rights to anything you create.
- **Export your full history anytime** — captions, schedules, analytics, all of it.
- **Cancel anytime.** Take your data with you, no hostage situation.
- **Modern, secure cloud infrastructure** — Kakoi runs the heavy lifting so you don't have to.

The intelligence is ours to host. The content is yours to own.

Roadmap

Just shipped

- One-click sign-in with Facebook / Instagram — no more API key fiddling
- LLM-powered onboarding — Kakoi reads your last 20 posts to learn your niche
- Background trends agent — personalized to your niche, 30-minute refresh
- Modern dashboard — side rail, dark mode, mobile bottom dock

Shipping next

- **Recommendations tab** — one feed answering "what should I post today?"
- **TikTok publishing** with auto-generated 9:16 video from any article
- Threads image support
- Niche-specific RSS feed packs (English teaching, food, fitness, tech...)

What you get on day one

- ✓ **One-click sign-in** with Facebook + Instagram (TikTok + Threads next)
- ✓ **Smart onboarding** — Kakoi learns your niche in 30 seconds
- ✓ **Niche-personalized RSS feeds + brand voice** from day one
- ✓ 4-platform publishing (IG, FB, TikTok drafts, Threads)
- ✓ AI captions, card generation, carousel builder
- ✓ **Autopilot** — set guardrails, walk away
- ✓ Calendar with iCal export
- ✓ Full analytics dashboard with recommendations
- ✓ **Personalized Trends** — your niche, not a generic feed
- ✓ Comments inbox with AI replies
- ✓ A/B testing, Brand Voice, Multi-language, Image Editor

Try it

[FILL IN: sign-up URL]

Sign in. Confirm your niche. Start creating.

1. Click [Continue with Facebook](#) or [Continue with Instagram](#)
2. Kakoi reads your last 20 posts and asks: *"You make English-teaching content, right?"*
3. Confirm (or adjust) in 3 taps — niche-specific RSS feeds + brand voice are now seeded
4. Open the Content tab. Posts that match *your niche* are already waiting.

No setup files. No keys to manage. No software to install. The hardest part is choosing your first post.

Kakoi

Make more. Burn out less.

[FILL IN: contact / demo link / email]
